Part II.

179 } gain of weight in grains when cultivated in
183 } France — certain effect of climate. 2

200 Tefier on no good from change of seed.

202 Disproved by his own experiment & observation
explain. Tefier & great care of cultivation
change of seed usual practice in France

210 bad seed producing equally good plant with
✓ good: p. 216 — rather opposed to principles

of selection. —

224 Effect of climate on habit of wheat 2

p 29 Mongolian wheat

409

35. Wheat left attended to & modified then garden
vegetable - contrast with Dalia - certainly
not a conspicuous variation.

37 Wheat must have been ready when it was when
first cultivated. 2

45 In Dabur has cultivated 30 years 150-160 var. 2
all keep true, except in seed itself

49 Will Oat of Australia, Journal Agriculture Soc. Vol 2, Part 2.

70 322. var.

78 Botanist has given wheat to call itself

80 } think wheat misperpetrated with closed flower
83 } has never seen Hybrids, between his 100-200 years.
81 } soon near each other.

84. Egyptian var. differ from French

89 Vilmosin on carrot *

94. argues if wheat changed by culture, so might all wood

In other quite ignores selection

97 grain for Egypt a good - it is not consistent

107. Had it not been for varietal var. he is

has thought that wheat was at first a rose

108 contrast variability of wheat & Dalia
